

ATTENTION: This on-line version will not exactly depict the colors. Contact an Elite Crete Systems distributor for an actual color chart.

COLOR-FAST™

Broadcast Color Hardener, Powdered Release and Integral Color

Product Descriptions

COLOR-FAST™ Broadcast Color Hardener is a professional grade, ready to use, powdered dry-shake, pre-colored hardener engineered and formulated to be easily applied to freshly placed concrete.

COLOR-FAST™ Powdered Release Agent is a powdered, colored bond breaking release for use when imprinting and stamping concrete to create unique coloring and antique effects.

COLOR-FAST™ Integral Color is a cost effect blend of synthetic iron oxide pigments for use with ready mixed concrete or pre-cast concrete products.

Custom colors including Black and White are available upon request.

Color selections on this chart approximate as closely as possible the appearance of the finished color. Variations can be expected due to job conditions, finishing techniques and types of sealer used. Powdered release is intended for surface highlighting and will not exactly match this chart. Some combinations of products can produce dramatically different results than anticipated. It is recommended that samples be produced to determine actual color finishes.
